DETAILED ACTION

This Office action is in response to the communication filed 9-7-05.

Claims 1, 4-6, 8, 10-17 and 31-43 are pending in the instant application.

Election/Restrictions

The restriction requirements pertaining to the election of a single sequence mailed on 7-3-02, 11-20-03 and 4-8-05 are hereby withdrawn. SEQ ID Nos. 65 and 66, listed in claim 20 (filed 12-22-04), are generic to a plurality of disclosed patentably distinct species comprising SEQ ID Nos. 61-64, and including the substrate binding site sequences listed as *i-x* in claim 23 (filed 12-22-04). These sequences have been rejoined and examined on their merits as set forth below.

Response to Arguments and Amendments

Withdrawn Rejections

Any rejections not repeated in this Office action are hereby withdrawn.

Maintained Rejections

Claims 1, 4-6, 8, 10-17 and 31-43 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The metes and bounds of the nucleic acid enzymes claimed cannot be determined from the language of the claims (Please see the written description rejection set forth below).

Claims 1, 4-6, 8, 10-17 and 31-43 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement for the reasons of record set forth in the Office action mailed 6-16-04, and for the reasons set forth below.

Applicant's arguments filed 9-7-05 have been fully considered but they are not fully persuasive. The instant claims set forth a description of nucleic acid enzymes that are derived from hepatitis delta virus, and which comprise the generic sequence set forth in SEQ ID Nos. 65 and 66, which sequences are presumed to be contiguous sequences within a single molecule. The claims set forth various higher order structural characteristics that are inherent in the nucleic acid enzymes encompassed by the generic sequences of SEQ ID Nos. 65 and 66. In view of the instant disclosure and the prior art, there appears to be adequate written description for the nucleic acid enzymes encompassed by the [contiguous] sequences of SEQ ID Nos. 65 and 66, and including SEQ ID Nos. 61-64 and the substrate binding site sequences set forth in *i-x* of previously filed claim 23 (filed 12-22-04). The claims filed 9-7-05, however, lack adequate written description because they set forth secondary structural characteristics of the nucleic acid enzymes claimed, but they omit the concise structural features and elements that are essential to the claimed invention (e.g. the SEQ ID Nos. 65 and 66,

Art Unit: 1635

which are presumed to be contiguous sequences within the same molecule). The scope of the instant claims embrace a myriad of structures, and no common structural attributes adequately identify or concisely describe the structural attributes encompassed by the claimed genus. The common attributes and/or characteristics concisely identifying members of the proposed genus are exemplified by the generic and contiguous sequences of SEQ ID Nos. 65 and 66.

Allowable Subject Matter

SEQ ID Nos. 61-64, and including the substrate binding sites listed as I-x in the claim 23 filed 12-22-04, appear free of the prior searched and of record.

The following is a statement of reasons for the indication of allowable subject matter: The nucleic acid enzymes encompassed by the claimed genus are derived from hepatitis delta virus, and comprise the generic sequence set forth in SEQ ID Nos. 65 and 66, which sequences are presumed to be contiguous sequences within a single nucleic acid enzyme molecule. The generic sequences set forth in SEQ ID No. 65 and 66 are adequately described in the instant disclosure and are exemplified in SEQ ID Nos. 61-64, and in figures 1-7 (e.g. SEQ ID Nos. 44-46, 53, 58, 59).
